the dell enterprise infrastructure planning tool (eipt) helps it professionals plan and tune their computer and infrastructure equipment for maximum efficiency. offering a wide range of configuration flexibility and environmental inputs, this can help right size your it environment.

eipt is a model driven tool supporting a large number of products and configurations for infrastructure numbering purposes. eipt models are based on hardware measurements with operating conditions representative of typical use cases. workloads can impact the power consumption greatly, meaning the same percent cpu utilization and different workloads can lead to widely different power consumption. it is not possible to cover all the workload, environmental, and customer data center factors in a model & provide percent accuracy figures with any degree of confidence. with that said, dell would anticipate (not guarantee or claim) a potential for some variation. customers are always advised to confirm eipt estimates with actual measurements under their own, actual workloads.

what's new:

ability to import a solution from online solutions configurator (osc)

future updates:

the cadence of release will be in roughly four week intervals.

- new products timed to shipping dates

support

- upgrading
 - when you upgraded a local copy of the tool it is recommended you clear your local cache. this is located at c:\users\user_name\appdata\local\dell\enterprise infrastructure planning tool
 - in the case of browser based, user ctrl+shift+del to prompt and clear browser cache
- errors
 - in the case of red tool error, please attempt a cache clear and confirm the issue repeats. if so, save your configuration json and either pdf or excel and send both to the feedback channel.
 - in the case of green "action items" errors, there are some false flags at present we are rooting out and suppressing. these errors do not impact calculation, but may indicate when a configuration is invalid. feel free to submit feedback on any items that do not appear to function correctly.

feedback

please submit questions or feedback to eipt_business_partners@dell.com or directly through the tool feedback form.

legal notice

- the dell enterprise infrastructure planning tool (eipt) is subject to change without notice and is provided "as is" without any warranty of any kind, whether express, implied, statutory, merchantability, fitness for a particular purpose, non-infringement or otherwise. dell does not make any representations regarding the accuracy or reliability of the eipt. the entire risk arising out of the use of this software tool remains solely for the customer. in no event shall dell be liable for any indirect, direct, consequential, incidental, special, punitive or other damages, however caused and under any theory of liability even if dell has been advised of the possibility of such damages, arising from use of the eipt or the information provided herein. dell has no duty to provide maintenance, support or updates to the eipt. the eipt may come bundled or otherwise be distributed with open source or other third party software, which is subject to the terms and conditions of the specific license under which it is distributed. output values obtained from the eipt are intended solely for a dell customer's planning purposes. all results are approximate and actual results may vary. eipt output values are solely for a dell customer's internal use and may not be published without the express prior written permission of dell.
