Motivation On Visual Search  
Learning is the process of memorization, integration and application of new information and concepts. Attention is the process of prioritizing and applying information and concepts. The end dynamic of these two processes involves distribution of energy, priorities, and decision making once information is absorbed.

Attention and working memory are both key to learning new information.

Attention allows information to be taken in. Working memory helps the brain make sense of it. Many kids who struggle to learn have attention issues, working memory issues, or both.
